

AUTOMATIC DIGITAL AUDIO RESTORATION

Some audio archives call for just a touch of sound quality smoothing to become approachable by a broad audience.

Automated digital audio restoration processes allow documents spoiled by abrasive sound characteristics to become listenable. These processes will not create

broadcast-quality audio files but they will make audio contents much more urbane.

Thanks to our long experience in dealing with audio archives, we provide an extremely cost-effective automatic digital audio restoration service.

SERVICES

- Automatic digital audio restoration
- Removal of clicks, overall spectral correction
- Attenuation of surface noise, hiss, distortion...
 - Consultation-quality restored audio files
 - Pricing scale for large quantities

EQUIPMENT, PROCESS

We use the best digital audio processors

- *Cedar Cambridge* system with all modules: from noise reduction to linear-phase equalization, from declipping to compression... this is the best of the best in automatic audio restoration tools today.

Process

- Our audio restoration engineers have a long experience in comprehending an audio collection. We base the settings of each automatic batch process on the average audio characteristics of the collection.

REFERENCES

We have created tens of thousands of automatically-restored consultation audio files for the Radio-Television Suisse (RTS) and other smaller-scale clients.
